

ANNOUNCEMENT

PICTURES OF CRUSTACEA TAKEN BY SEM

A collection of photographs by Petr J. Juracka

We here announce the existence of a collection of SEM-micrographs of some larger taxa of the Crustacea, taken by Petr Juracka from Prague, a Ph.D. student in biology. The photographs are based on very clean specimens that have largely been pictured in whole, as habitus, with additional details in some cases. Previous pictures of this author can be viewed at the provisional address:

<http://petr.juracka.eu/en/gallery/category/15>

Please realize it is (very) nice to have an opportunity to see the animals you have been working with for so long, now in their true proportions, and in 3-D views. As an example, one such image is reproduced herewith, in this case a portunid zoea.

Those interested should visit the website as above, or contact the photographer through:

Mr. PETR JAN JURACKA, M.Sc.
Department of Ecology, Faculty of Science, Charles University
Vinicna 7, CZ-128 44 Prague / Praha 2, Czech Republic
